## Description

AP1122 is a low dropout positive fixed-mode regulator with 1A output current capability. The product is specifically designed to provide well-regulated supply for low voltage IC applications such as high-speed bus termination and low current 1.2V logic supply. AP1122 is also well suited for other applications such as VGA cards. AP1122 is guaranteed to have lower than 1.3 V dropout at full load current making it ideal to provide well-regulated outputs of 1.2 output voltage with 2.5 V input voltage supply.

## Applications

- PC peripheral
- Communication

## Features

- 1.3V maximum dropout at full load current
- Fixed $1.2 \mathrm{~V} \pm 2 \%$ output voltage
- Fast transient response
- Output current limiting
- Built-in thermal shutdown
- Good noise rejection
- Packages: SOT223-3L, TO252-3L, SOT89-3L, TO263-3L and TO220-3L
- SOT89-3L, SOT223-3L and TO252-3L: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/ RoHS Compliant (Note 1)

## Pin Assignments

Notes: 1. EU Directive 2002/95/EC (RoHS). All applicable RoHS exemptions applied. Please visit our website at http://www.diodes.com/products/lead_free.html.

## Typical Application Circuit

## Pin Descriptions

| Pin Name | I/O | Pin \# | Description |
| :---: | :---: | :---: | :--- |
| GND | I | 1 | Ground Pin |
| $V_{\text {OUT }}$ | O | 2 | The output of the regulator. A minimum of 10uF capacitor $(0.15 \Omega \leq \mathrm{ESR} \leq 20 \Omega)$ <br> must be connected from this pin to ground to insure stability. |
| $\mathrm{V}_{\text {IN }}$ | I | 3 | The input pin of regulator. Typically a large storage capacitor is connected from <br> this pin to ground to insure that the input voltage does not sag below the <br> minimum dropout voltage during the load transient response. |

Notes: 2. See thermal regulation specifications for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead $=1 / 18^{\prime \prime}$ from the package.
3. Line and load regulation are guaranteed up to the maximum power dissipation of 15 W . Power dissipation is determined by the difference between input and output differential and the output current. Guaranteed maximum power dissipation will not be available over the full input/output range.
4. Quiescent current is defined as the minimum output current required in maintaining regulation. At 12 V input/output differential the device is guaranteed to regulate if the output current is greater than 10 mA
5. Test conditions for SOT89-3L, TO252-3L, TO220-3L, and TO263-3L: Devices mounted on FR-4 substrate, single sided PC board, 2oz copper, with minimum recommended pad layout, no air flow.
6. Test condition for SOT223-3L: Device mounted on FR-4 substrate, single sided PC board, 2 oz copper, with $5 \mathrm{~mm} \times 5 \mathrm{~mm}$ thermal pad layout, no air flow.

## LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
